

## Tips for Closing Statin Therapy Care Gaps

1. For patients who are not able to tolerate statin therapy, providers can hover over "Statin Therapy for Prevention and Treatment of CVD" in the health maintenance section of the patient's chart **to show the appropriate exclusion codes**.
  - These are the only codes HEDIS will recognize as exclusions due to statin intolerance.

Current Care Gaps		
Statin Therapy for Prevention and Treatment of CVD		🔴 Overdue - never done
MAMMOGRAM	Diagnoses that Exclude Pt from Care Gap: Statin Myopathy G72.0, Myalgia due to statin M79.10, Statin-induced myositis M60.9, Rhabdomyolysis due to statin therapy M62.82, Statins contraindicated Z53.09, Hepatotoxicity due to statin drug K71.9	🔴 Overdue - never done
Pneumococcal		🔴 Overdue since 12/11/2018
COVID-19 Vaccine		🔴 Overdue since 9/9/2021
